## TECHNOLOGY STRATEGY AND VISION

Supporting the decision between technology ,vendors, infrastructure and application fit, implementation and operations assurance

## DATA CENTRE STRATEGY - GLOBAL MANUFACTURING COMPANY

### Background

The client was looking to consolidate sites on which a large number of their applications were hosted. In tandem a transformation programme was about to begin increasing the criticality of the application estate. This created an urgent need to review how their data centre infrastructure was delivered and given the number of different options available, assistance was required to determine the correct strategy

### Approach

The Coeus team conducted a full current state review to fully understand the present context and infrastructure landscape, develop a set of strategic aims, and assess all options to allow balanced recommendations to fully meet the future needs of the business

- Assessment of current application and hardware estate, supplier landscape, people and skills, and costs
- Development of business and IT requirements and gap analysis to determine success criteria
- Appraise all possible options and qualitatively and quantitatively assess in terms of strategic fit, feasibility, and cost
- Provide recommended course of action and high level roadmap

### Outcomes and Deliverables

The Coeus team worked with the IT team and the business to rapidly develop:

- Strategic requirements, including a set of measurable success criteria
- Full assessment of current data centre infrastructure and suitability to meet the forward business strategy
- Detailed sourcing options appraisal; including owned, co-location, hybrid, and cloud
- Recommended data centre strategy down to application level
- Roadmap and cost model to support business case creation

### Benefits

The benefits of working with the Coeus team were:

- Fully documented data centre and application landscape where none previously existed
- Clearly articulated strategic requirements
- Robust set of actionable recommendations, possible suppliers, and timelines
- Cost model to assist in rapidly developing full business case, which projected operational and capital reductions in spend
